A comparative study utilizing open flap debridement with and without enamel matrix derivative in the treatment of periodontal intrabony defects: a 12-month re-entry study.
Froum SJ, Weinberg MA, Rosenberg E, Tarnow D.
Read full abstract on PubMed.gov

A five-year life-table analysis on wide neck ITI implants with prosthetic evaluation and radiographic analysis: results from a private practice.
Bischof M, Nedir R, Abi Najm S, Szmukler-Moncler S, Samson J.
Read full abstract on PubMed.gov

A noninterventional study documenting use and success of implants with a new chemically modified titanium surface in daily dental practice.
Luongo G, Oteri G.
Read full abstract on PubMed.gov

A randomized clinical trial comparing enamel matrix derivative and membrane treatment of buccal Class II furcation involvement in mandibular molars. Part I: Study design and results for primary outcomes.
Read full abstract on PubMed.gov

Biologic width around titanium implants. A histometric analysis of the implanto-gingival junction around unloaded and loaded nonsubmerged implants in the canine mandible.
Cochran DL, Herrmann JS, Schenck RK, Higginbottom FL, Buser D.
Biologic width around titanium implants. A histometric analysis of the implanto-gingival junction around unloaded and loaded nonsubmerged implants in the canine mandible.
Cochran DL, Hermann JS, Schenk RK, Higginbottom FL, Buser D.

Biomechanical evaluation of the interfacial strength of a chemically modified sandblasted and acid-etched titanium surface.
Read full abstract on PubMed.gov

Bone apposition around two different sandblasted and acid-etched titanium implant surfaces: a histomorphometric study in canine mandibles.
Bornstein MM, Valderrama P, Jones AA, Wilson TG, Seibl R, Cochran DL.
Read full abstract on PubMed.gov

Bone apposition around two different sandblasted, large-grit and acid-etched implant surfaces at sites with coronal circumferential defects: an experimental study in dogs.
Lai HC, Zhuang LF, Zhang ZY, Wieland M, Liu X.
